SUMMARY

Computer Science undergraduate (Cybersecurity) with hands-on experience across the software testing lifecycle — manual and automated testing, black-box test design, API Testing, and defect documentation through clear, reproducible bug reports. Background in VAPT/WAPT and bug bounty. Proficient in Python, and comfortable in Linux/shell environments. Seeking Software Tester, SDET, or Security Tester roles.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, HTML, SQL

Software Testing & QA: Manual & Automated Testing, Black-Box Testing, API Testing, Defect Documentation & Reporting

Security Testing: VAPT / WAPT, OWASP Top 10, MITRE ATT&CK Framework

Automation & Tools: Selenium, Postman, Git, GitHub, Burp Suite, Metasploit, Nmap, Shodan, Amass, Tenable Nessus, Nuclei, Splunk

Web & Backend: React, Tailwind CSS, GraphQL, REST API, Firebase

Database: MongoDB, MySQL

Environments: Linux, Shell Scripting (Bash)

EDUCATION

B.Tech, Computer Science & Engineering (Cyber Security)

2023 – 2027

P P Savani School of Engineering | CGPA: 7.9/10

Relevant Coursework: Operating Systems, Computer Networks, Cloud Computing, Database Management Systems, Systems & Network Security

WORK EXPERIENCE

Web Development Intern - The Developers Arena

May 2026 – Present

- Build web development projects end-to-end — from requirements through implementation and testing — following industry best practices.
- Developed and tested a Python application for restaurant menu management, including database design and functional validation.

Bug Hunter (Independent Security Researcher)

2023 – Present

- Apply systematic black-box testing — including boundary value and edge-case analysis — to identify functional and security defects across public, private, and government bug bounty programs, documenting reproducible defects from submission through triage to resolution.
- Identified and reported vulnerabilities for organizations including Shiprocket, IBM, NASA, Akamai, Alshaya, Dyson, and NCIIPC (Government of India), among others.

ACHIEVEMENTS

- Winner, University CTF and bug hunting competitions.
- Recognized and awarded by the IBM security/product team for identifying and reporting a critical vulnerability.
- Earned multiple acknowledgments and swag from organizations for security testing contributions.
- Top 2% rank on TryHackMe.

PROJECTS

AIRS: AI-Powered Incident Response Solution for SMEs

- Built a security dashboard with a React frontend and Python/FastAPI backend, using Firebase for data storage and real-time updates.
- Integrated open-source security detection tools with a lightweight, locally-hosted LLM to interpret raw technical alerts.
- Designed the assistant to translate technical alerts into plain-language summaries with risk scores and recommended mitigation steps, aimed at SME teams without dedicated security staff.

Student Achievement & Certificate Authentication System

- Built a role-based web application using Python/Flask (backend) and HTML5, CSS3, JavaScript, and Bootstrap (frontend), with MySQL for secure, persistent data storage.
- Designed an automated certificate verification module using hash-based integrity checks to cross-reference submitted certificates against stored records.
- Validated the verification logic against genuine and tampered certificate inputs to confirm reliable detection of fraudulent records.
- Implemented separate access flows for students and faculty to manage role-appropriate data and permissions.

Vajra

- Built a lightweight, portable SSRF-hunting tool in Bash for Linux environments to automate detection of server-side request forgery vulnerabilities.
- Designed for use in personal bug bounty workflows, prioritizing speed and minimal dependencies over a full GUI toolset.

CERTIFICATES

- Google Cybersecurity Professional Certificate
- Multicloud Network Associate Certificate
- NPTEL – Practical Cyber Security for Practitioners
