SUMMARY

Computer Science undergraduate (Cybersecurity) with 2+ years of hands-on Linux, networking, and scripting experience gained through vulnerability assessment (VAPT/WAPT) and bug bounty research on production systems for enterprise and government programs. Comfortable working across the Linux command line, TCP/IP networking, cloud fundamentals, and Python/Bash automation to identify, troubleshoot, and document system-level issues. Seeking a Site Reliability Engineering/SOC analyst / VAPT internship to apply this systems and troubleshooting background to production support, monitoring, and automation.

TECHNICAL SKILLS

- **Linux & OS:** Linux (CLI)
- **Networking & Network Security:** TCP/IP, DNS, HTTP/HTTPS, SSH, Subnetting, OSI Model, Layer-wise Security
- **Cloud:** AWS, GCP Fundamentals, Firebase
- **Scripting & Automation:** Python, Bash
- **Version Control:** Git, GitHub
- **Monitoring & Observability:** Splunk, Log Analysis & Alerting
- **Database:** MySQL, MongoDB, SQL
- **Security & Testing Tools:** Burp Suite, Metasploit, Nuclei, Tenable Nessus, Postman, Selenium
- **Web Development:** React, Tailwind CSS, GraphQL, REST API, Flask, FastAPI

EDUCATION

B.Tech, Computer Science & Engineering (Cyber Security)

2023 - 2027

P P Savani School of Engineering | CGPA: 7.9/10

Relevant Coursework: Operating Systems, Computer Networks, Cloud Computing, Database Management Systems, Systems & Network Security

WORK EXPERIENCE

Web Development Intern - The Developers Arena

May 2026 - Present

- Build and maintain full-stack web applications in a self-paced environment, following industry best practices for code quality and delivery.
- Developed a Python-based restaurant menu management application, including MySQL database schema design and CRUD operations.
- Complete weekly technical assessments and project submissions under deadline, demonstrating consistent troubleshooting and self-directed learning.

Bug Hunter (Independent Security Researcher) - Self-Directed / Multiple Programs

2023 - Present

- Perform hands-on vulnerability assessment and penetration testing (VAPT/WAPT) on production systems for enterprise and government programs, working from a Linux CLI environment via SSH.
- Secured companies including Shiprocket, IBM, NASA, Sky-Akamai, Alshaya, Dyson, and NCIIPC (Government of India), mapping findings to MITRE ATT&CK and CVE databases.

PROJECTS

Student Achievement & Certificate Authentication System

- Built a role-based web application for student and faculty management, with an automated verification module that cross-references records to flag fraudulent academic certificates.
- Designed a secure database schema and implemented cryptographic hashing for certificate integrity checks.

AIRS: AI-Powered Incident Response Solution for SMEs

- Designed a security monitoring dashboard that translates raw technical alerts into clear, risk-scored summaries with recommended mitigation steps for non-technical teams.
- Integrated a lightweight local LLM to automate alert triage, reducing the manual effort needed to interpret and respond to security events.

Vajra

- Built a lightweight automation tool for detecting SSRF vulnerabilities, enabling fast, repeatable scans from the command line.

ACHIEVEMENTS

- Winner of University CTF and Bug Hunting competitions.
- IBM: Recognized and awarded by the IBM security/product team for identifying and reporting a critical bug.
- Earned multiple swags and acknowledgments from various organizations for security testing.
- Top 2% rank on TryHackMe (hands-on Linux, networking, and system administration labs).

CERTIFICATIONS

- Google Cybersecurity Professional Certificate (covers Linux, networking, SQL, and Python fundamentals)
- Aviatrix ACE - Multicloud Network Associate (cloud networking fundamentals across AWS, Azure, GCP)
- NPTEL Practical Cyber Security for Cybersecurity Practitioner
